

# Washerly

by Lisa Bi

Washerly is a laundry app. When you place an order, it will be picked up, washed, and delivered with a schedule that fits your needs.

Users select their preferences using drop down menus.

These choices are divided into several screens in order to avoid overwhelming the user with too much information.

---

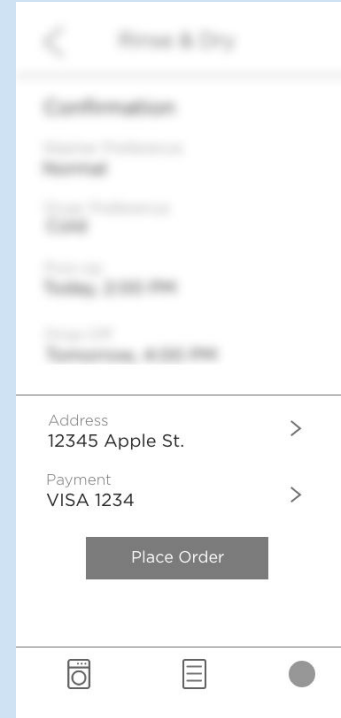

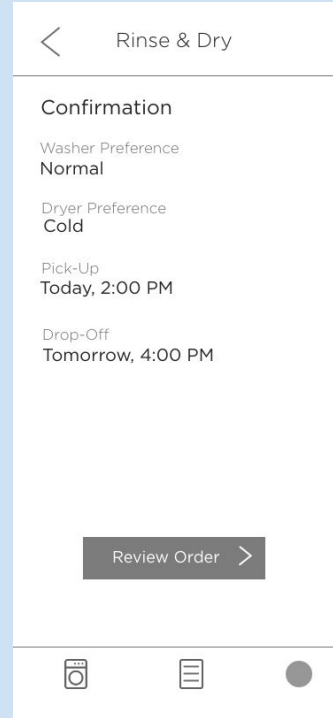

## Placing an order

Placing an order requires 4 decisions:

Selecting a service, selecting machine preferences, selecting a pickup time, and selecting a drop off time.

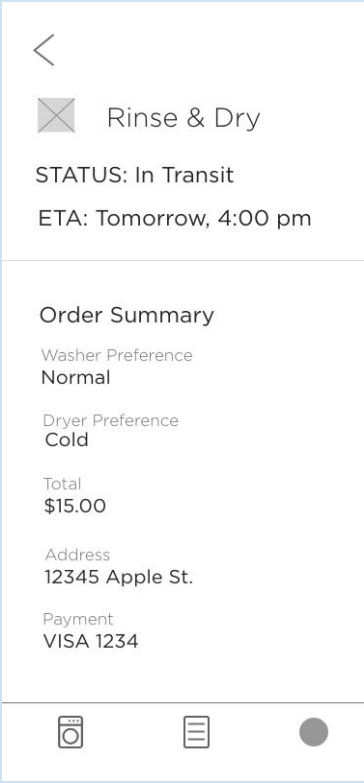

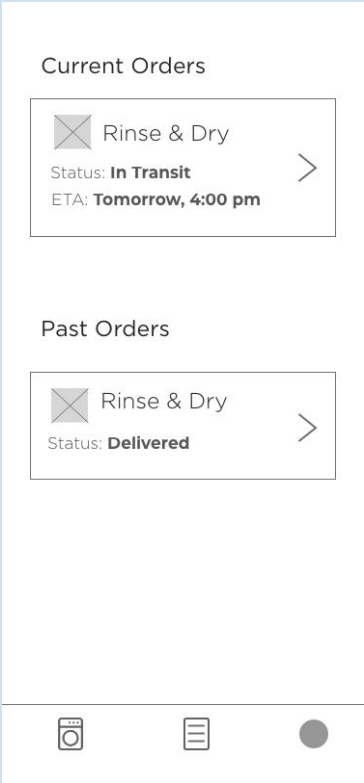

## Placing an order (continued)

After, the user is prompted to review the order, and finally place the order.

# Current & Past Orders

Users can see their current and past orders by tapping the middle tab in the home bar. Tapping on an order brings up more details on the order, including current status of the order, as well as the machine preferences, the price, and pickup/delivery address, and the payment method.

## Profile & Settings

Finally, the third tab in the home bar brings up the profile and settings. Here users, can edit their addresses and payment methods. Under the settings icon, users can adjust their notification preferences.
